SUMMARY

Software & AI Engineer and Senior Full-Stack Developer with 6+ years of experience building scalable, high-performance web and mobile applications across healthcare, SaaS, and enterprise domains, with hands-on experience shipping AI-powered features to production. Currently at RainStellaTech building Orva, an AI-driven perioperative workflow platform, where recent work includes integrating OpenAI and Google Gemini LLM APIs for a production chatbot feature and automated extraction of structured data from clinical notes and radiology reports. Strong expertise in React, React Native, Node.js, NestJS, event-driven systems, and cloud-native deployments, complemented by growing experience in agentic AI systems, LLM integration, and Python/FastAPI, and daily use of AI-assisted development tools (Claude Code, Cursor, ChatGPT) to accelerate delivery without sacrificing code quality. Known for ownership, dependable delivery on estimates, and clear workflow communication; comfortable collaborating with distributed, US-based teams across any timezone.

SKILLS

- **AI & Agentic Development:** OpenAI API, Google Gemini API, LLM Integration, Prompt Engineering, Agentic AI / Multi-Agent Systems, Tool Calling / Function Calling, Retrieval-Augmented Generation (RAG, in progress), FastAPI (Python), AI-Assisted Development (Claude Code, Cursor, ChatGPT)
- **Languages:** JavaScript, TypeScript, Python, SQL
- **Frontend:** React, React Native, Next.js, Angular, Ionic, Responsive Web Development, SPA, PWA, Redux, RxJS, MobX, React Query, Material UI, Angular Material, Bootstrap, Ant Design, Tailwind CSS, Kendo UI, NativeBase, jQuery, Knockout.js, Handlebars.js, Underscore.js, Backbone.js
- **Backend:** Node.js, NestJS, Express.js, FastAPI, TypeORM, GraphQL, REST APIs, API Integration, Authentication & Authorization (JWT, OAuth)
- **Data & Messaging:** SQL, NoSQL, MongoDB, Kafka, Redis
- **Cloud & DevOps:** Docker, Kubernetes (AKS), GCP, AWS (API Gateway, S3, SQS), Azure, 3Scale, CI/CD
- **Testing & Tooling:** Jest, Enzyme, Supertest, Unit & Integration Testing, Debugging, Git, Bitbucket, Webpack, Babel, Gulp, Vite, Chart.js, D3.js, HTML, CSS, Sass, Less
- **Process & PM Tools:** Scrum/Agile, Jira, Redmine, Trello
- **Core Competencies:** Analytical Thinking, Problem Solving, Debugging, Communication, Collaboration
- **Leadership & Collaboration:** Team Leadership & Mentorship, Ownership & Accountability, Project Estimation, Workflow & Requirements Discussions, Cross-Functional Collaboration, Flexible Timezone Availability (comfortable with US Central hours)

EXPERIENCE

RainStellaTech *Fullstack Developer / Backend Lead*

08/2024 - Present

- Integrated OpenAI and Google Gemini LLM APIs into Orva to power a production chatbot feature and automate extraction of structured data from clinical notes and radiology reports, cutting manual data entry for clinical staff.
- Full-stack development for Orva, an AI-driven surgical workflow and voice automation platform used in live operating environments.
- Built and maintained tablet applications using React Native for real-time clinical workflows.
- Developed admin and analytics dashboards using React, React Query, and Material UI.
- Implemented real-time communication using WebSockets and Socket.IO, enabling live case updates and status synchronization between backend and tablet apps.
- Integrated Sentry for frontend and backend error tracking, improving production observability and faster incident resolution.
- Developed data-driven visualizations using D3.js for operational and performance analytics.
- Designed and implemented backend services using NestJS, TypeScript, and Node.js.
- Built event-driven backend workflows using Kafka, BullMQ, and Redis.
- Implemented FHIR-compliant data transformations for healthcare interoperability.

- Designed MongoDB aggregation pipelines for analytics and reporting.
- Containerized services using Docker and deployed across Azure Kubernetes Service (AKS) and Google Cloud Platform (GCP).
- Implemented secure, multi-tenant APIs using JWT authentication and OAuth authorization, with permission guards and data redaction for patient privacy.
- Wrote unit and integration tests using Jest and Supertest.
- Collaborated closely with product, AI, frontend, and DevOps teams to deliver features from concept to production.

Folio3 *Senior Software Engineer*

08/2020 - 07/2025

- Led the development of ERP, SaaS, digital health platforms, education and property management systems, and mobile apps including integration with wearable health devices.
- Designed and implemented HIPAA-compliant features such as secure authentication and authorization (JWT, OAuth), patient onboarding, appointment scheduling, medical record-keeping, and real-time communications.
- Built scalable microservices architecture using Node.js, Nest.js, Express.js, TypeORM, and MongoDB, ensuring high availability and performance.
- Integrated FHIR-based APIs for EMR data exchange and interoperability with third-party systems.
- Developed real-time event pipelines with Kafka to handle live patient vitals and clinical updates from wearable devices.
- Utilized GraphQL for efficient querying and data federation across distributed systems.
- Upgraded Angular from version 13 to 15 and optimized the frontend build pipeline using Angular CLI and Webpack enhancements, resulting in faster load times and a smoother user experience.
- Migrated React 17 to 18 and optimized frontend build pipelines, reducing load times and improving user experience.
- Practiced Test-Driven Development (TDD) using Jest and Enzyme, achieving up to 95% test coverage on core healthcare services.
- Automated clinical workflows such as appointment reminders, reducing patient no-show rates by 30%.
- Collaborated closely with architects and clinicians to define system requirements and microservices boundaries.
- Provided mentorship to junior developers through code reviews, tech sessions, and hands-on guidance.
- Actively contributed to Agile ceremonies, sprint planning, and continuous improvement initiatives.
- Served as a member of the Entertainment & Culture Committee, organizing 10+ company-wide events, reflecting team leadership and ownership beyond core engineering duties.

Tplex *Software Engineer*

01/2019 - 07/2020

- Development of ERP, B2B, and E-commerce web applications, delivering tailored solutions to optimize business operations and drive efficiency.
- Engineered a mobile application using Angular and Ionic, ensuring seamless cross-platform functionality and an intuitive user experience.
- Integrated secure payment systems such as Stripe and PayPal, ensuring reliable transaction processing and adherence to security standards.
- Implemented seamless integration with QuickBooks and Google Calendar, automating data synchronization and enhancing productivity for clients.
- Utilized a diverse technology stack including HTML, CSS, Less, Sass, Material Design, Ant Design, Bootstrap, Tailwind CSS, Kendo UI, Angular, React, Knockout.js, Node.js, Express.js, MongoDB, MySQL, and GraphQL to build scalable and maintainable software solutions.
- Played a key role in client demonstrations, effectively showcasing product features and capabilities, and provided accurate project estimates to align with client expectations.

KEY ACHIEVEMENTS

- Shipped production LLM-powered features (OpenAI, Gemini) for a clinical chatbot and automated clinical-note/radiology data extraction within a live healthcare platform.
- Led end-to-end delivery of scalable web and mobile platforms, owning architecture, development, and cloud deployment.
- Designed real-time, event-driven systems using Kafka, WebSockets, Redis, and BullMQ to support high-volume workflows.
- Built AI-powered analytics and alerting solutions enabling proactive, data-driven operational decisions.
- Delivered HIPAA-compliant, multi-tenant systems with strong security and data privacy controls.
- Integrated complex third-party systems and internal services to enhance platform interoperability.
- Mentored engineers, set technical standards, and collaborated cross-functionally to ensure timely, high-quality delivery.

PROJECTS

Healthcare AI Agents (Personal Project)

Agentic AI system for healthcare workflows built around six specialized, LLM-powered agents behind a single API — Clinical Documentation (transcript to structured SOAP note), Medication Safety (drug interaction checks), Patient Triage (urgency classification), Lab Results Interpreter, Patient Education, and Radiology Interpretation. Agents use function/tool calling and return structured, confidence-scored output.

Technologies used: Python, FastAPI, OpenAI API, Gemini API, Agentic AI / Multi-Agent Architecture, Tool Calling, REST API

Orva

AI-driven perioperative platform giving hospitals real-time visibility into operating rooms, helping leaders reduce delays, improve patient safety, and optimize OR utilization.

Technologies used: React, React Native, React Query, Material UI, Socket.IO, WebSockets, D3.js, NestJS, Node.js, TypeScript, MongoDB, Kafka, BullMQ, Redis, Docker, Kubernetes, Sentry, OpenAI API, Gemini API

Telemed2u

Web-based healthcare platform for end-to-end patient care: scheduling, secure video consultations, clinical documentation, lab order management, superbill generation, and patient records.

Technologies used: React, Redux, Node.js, AWS, MySQL, DynamoDB

Vahana

Mobile fitness app integrating Apple Watch, Samsung Galaxy Watch, Fitbit, and Garmin data into a single view of the user's health.

Technologies used: React Native, TypeScript, Redux, Node.js, Nest.js, AWS, TypeORM, PostgreSQL

Propertese

Folio3's proprietary Property Management Solution pre-integrated with NetSuite, streamlining property creation, tenant management, contract creation, rent collection, and revenue recognition for real estate businesses.

Technologies used: HTML, CSS, Bootstrap, Chart.js, ESLint, React, Redux, Node.js, GraphQL, Express.js, Kafka, MongoDB, AWS, Objection.js, Knex, MySQL, Amazon SQS

EDUCATION

- **Master of Science, Software Engineering** (2024 - 2026) - Sir Syed University of Engineering & Technology, Karachi
- **Bachelor of Science, Computer Engineering** (2016 - 2020) - Sir Syed University of Engineering & Technology, Karachi
- **Intermediate** - Govt. Boys Higher Secondary School, Jhuddo, 2015
- **School** - Prestige High School, Karachi, 2012

LANGUAGES

English - B1

CERTIFICATIONS

- HIPAA Awareness for Business Associates, HIPAA Security
- Certification in Web Designing, Certification in Web Development, Certification in Software Development
